

CORRECTABLE CAUSES OF MALE INFERTILITY

Varicocele Repair

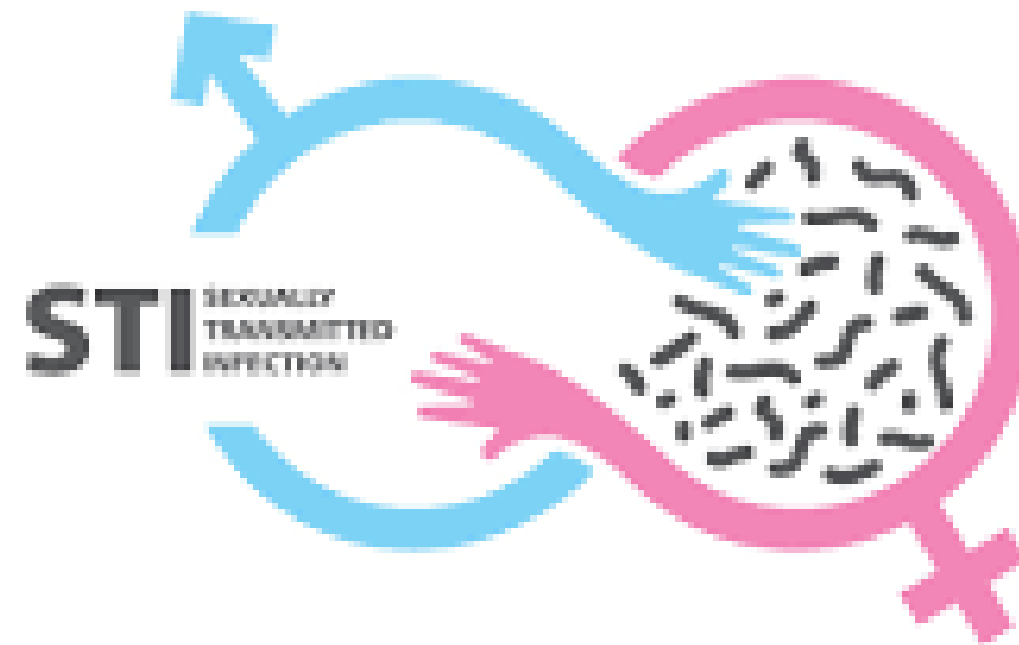

VARICOCELES ARE ENLARGED VEINS IN THE SCROTUM THAT CAN LEAD TO OVERHEATING OF THE TESTICLES, WHICH IN TURN CAN IMPAIR SPERM PRODUCTION. SURGICAL REPAIR (VARICOCELECTOMY) TO CORRECT THE VARICOCELE CAN IMPROVE SPERM QUALITY AND FERTILITY IN SOME CASES.

Infections

Infections of the reproductive tract, such as epididymitis or sexually transmitted infections (STIs), can cause temporary infertility. Treating the infection with antibiotics can restore fertility if there is no permanent damage

**Sexually
Transmitted
Infection (STI)**

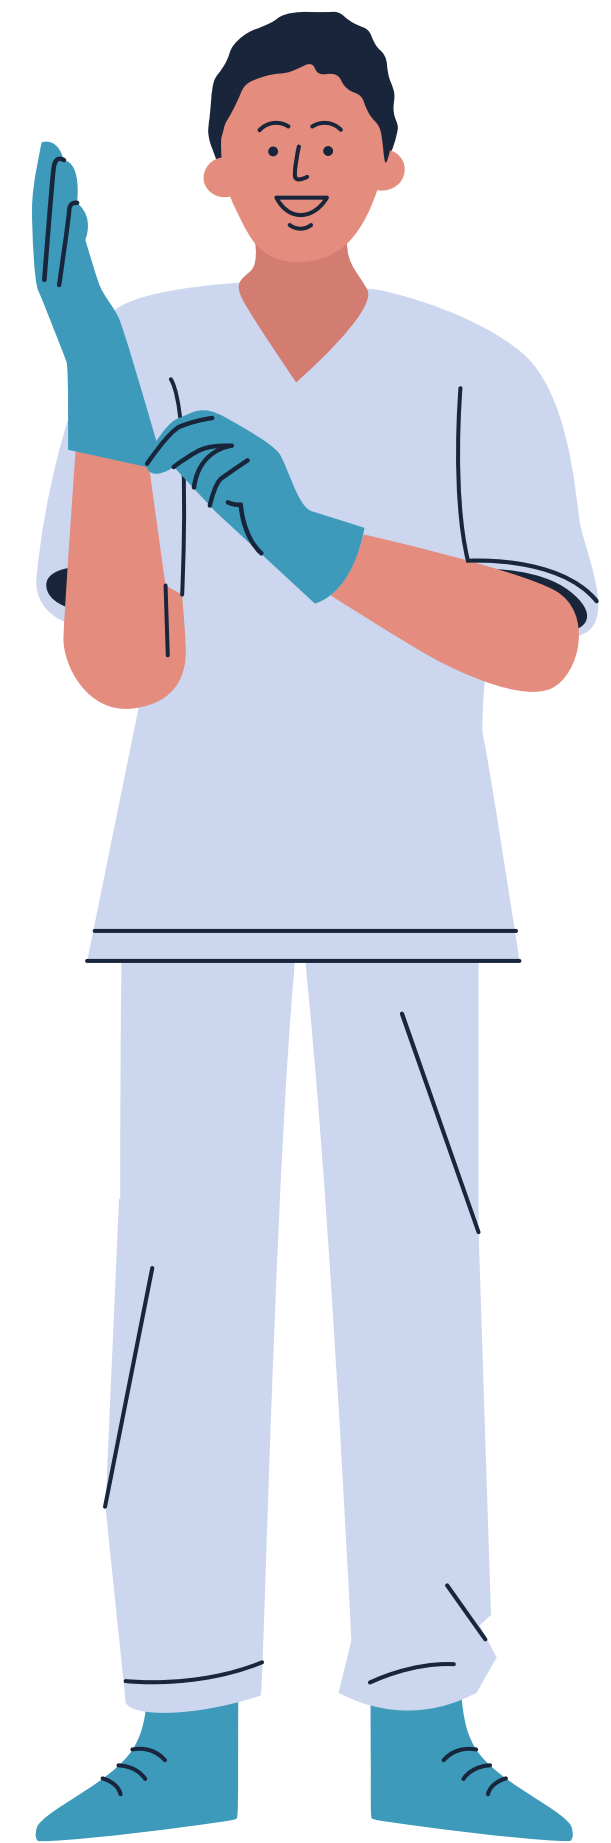

Hormonal Imbalances

Hormonal imbalances, such as low testosterone levels or high levels of prolactin, can affect sperm production

Medication Side Effects

Some medications, including certain antipsychotics, steroids, and chemotherapy drugs, can negatively impact sperm production

Lifestyle Factors

MAKING LIFESTYLE CHANGES, SUCH AS QUITTING SMOKING, REDUCING ALCOHOL INTAKE, LOSING WEIGHT, AND AVOIDING TOXINS, CAN IMPROVE FERTILITY.

WARNING SIGNS OF DEPRESSION

1 in 5 people will suffer from depression in their lifetime. Look out for these signs that you may be depressed.

EJACULATORY ISSUES

CONDITIONS THAT AFFECT THE ABILITY TO EJACULATE, SUCH AS RETROGRADE EJACULATION (WHERE SEMEN FLOWS BACKWARD INTO THE BLADDER) OR ANEJACULATION (INABILITY TO EJACULATE), CAN BE ADDRESSED WITH MEDICAL TREATMENTS OR ASSISTED REPRODUCTIVE TECHNIQUES LIKE SPERM RETRIEVAL.

BLOCKAGES

BLOCKAGES IN THE MALE REPRODUCTIVE TRACT CAN PREVENT THE RELEASE OF SPERM DURING EJACULATION. SURGICAL PROCEDURES, SUCH AS VASECTOMY REVERSAL OR EPIDIDYMAL REPAIR, MAY BE ABLE TO CORRECT THESE BLOCKAGES.

Most of the patients receive the proper treatment they need.

ERECTILE DYSFUNCTION

ERECTILE DYSFUNCTION CAN MAKE IT DIFFICULT TO ACHIEVE OR MAINTAIN AN ERECTION NECESSARY FOR SEXUAL INTERCOURSE. MEDICATIONS, VACUUM ERECTION DEVICES, OR PENILE IMPLANTS CAN HELP MANAGE THIS ISSUE.
